

## How we are protecting our patients, their families, and our employees

We pledge to do everything in our power to protect and keep our patients, their families and our employees as healthy and safe as possible. We have established best practices to support and advocate for the people in our care, meeting or exceeding healthcare industry standards. We will continue to respond appropriately as we learn and adapt to new developments.

### Our COVID-19 Safeguards

#### Symptom Screening

Our teams are screened daily for COVID-19 prior to the start of any visits. In addition, we perform a daily symptom screening with each patient prior to treatment.

#### Personal Protective Equipment (PPE)

All staff wear a face mask and eye protection at all times while working with patients.

#### Infection Control Best Practices

Our staff perform hand hygiene before and after contact with patients, after contact with contaminated surfaces or equipment, and after removing personal protective equipment (PPE).

#### Disinfectant Protocols

Our rehab staff clean and disinfect all medical, exercise, and electronic equipment following each treatment session. We do not utilize supplies that cannot be properly disinfected unless they are for a single patient use.

#### Social Distancing

Our team maintains 6-foot distances between other staff and a patient's family members.

#### Coordination & Communication

Our multidisciplinary COVID-19 task force meets daily to ensure that our staff members have the most up to date information and resources from the Centers for Disease Control and Prevention (CDC) and the Centers for Medicare and Medicaid Services (CMS).
